

Engineering and CTE at Candor High School. We are a small school with a huge impact on our community that has a positive impact on our student's future.

This is a unique opportunity to work hand in hand with industry in a high school that has benefited from over \$300,000 worth of donations of materials supplies and industry level equipment. Candor is uniquely situated in the Southern tier of New York where advanced manufacturing can be found in every corner of the surrounding communities. Candor's manufacturing and engineering program focuses on the basics of manufacturing documentation, CNC machining, and live go-kart construction and testing. Programs are closely tied to dual credit opportunities and industry credentialing of students. Our facility is full of equipment tools and supplies that are found in industry and will not limit your creativity.

Candor has partnered with turbine blade manufacturers, construction companies and high end defense contractors to give students opportunities to learn in a real world environment

Come be part of the team and help the department continue to grow as manufacturing and engineering
