# LOS BANOS AIR MONITORING NETWORK

The Los Banos Air Monitoring Network is a School-based Air Monitoring Network to provide residents with local real time air data.

## Who We Are?

CCAC is a nonprofit organization aims to provide education and direct services, build regional capacity and advocate for sensible policies that improve health and address inequities by reducing environmental impacts and emphasizing the prevention and management of chronic disease.

## Air Monitoring Network

CCAC, in partnership with Los Banos Unified School District, deployed a network of air pollution monitors at schools across the district. This includes 10 monitors and 1 regulatory grade monitor.

This project is funded by the California Air Resources Board.

## Goal of this project

Our goal is to educate residents about air pollution and how to protect vulnerable communities. This involves setting up a Community Steering Committee and utilizing the SJVAir alert system.

## Community Steering Committee

Establishing a *Community Steering Committee* to help inform school staff and residents about air pollution, SJVAir and how to protect vulnerable populations (kids, elderly)

## SJVAir

SJVAir provides email and text message alerts to schools and residents based on *local*, real-time PM2.5 data from the monitors nearest your school, home or work

## WHO WE ARE

SJVAir provides email and text message alerts to schools and residents based on local, real-time PM2.5 data from the monitors nearest your school, home or work.

## HOW TO SIGN UP

1. Sign up for an SJVAir account: you just need to enter and verify your cell phone number to receive text message air alerts
2. Subscribe to monitors: Sign up to receive alerts from any of the 400+ monitors in the SJVAir network
3. Select Alert Level: choose your preferred air quality level (e.g. unhealthy for sensitive individuals). You can change alert levels anytime.
