

ESSER III ARP Grant Allocations

- Remediate learning loss through implementation of extended school year for at-risk students, extensive social and emotional support through additional school counselor, learning recovery classroom, and enhanced research-based curricular intervention purchases.
- Air filtration upgrades have been made. Ventilation and HVAC upgrades to district facilities have been made from ESSER III. Ventilation mitigation strategies help reduce virus spread. The lower the concentration, the less likely viral particles can be inhaled into the lungs (potentially lowering the inhaled dose); contact eyes, nose, and mouth; or fall out of the air to accumulate on surfaces. Protective ventilation practices and interventions can reduce the airborne concentrations and reduce the overall viral dose to occupants.
